Øgsl˙sf -*- texinfo -*-

`gsl_sf ()` [Loadable Function]

Octave bindings to the GNU Scientific Library. All GSL functions can be called with by the GSL names within octave.

Øclausen -*- texinfo -*-

`y = clausen (x)` [Loadable Function]
`[y, err] = clausen (...)` [Loadable Function]

The Clausen function is defined by the following integral,

Cl˙2(x) = - int˙0ˆx dt log(2 sin(t/2))

It is related to the dilogarithm by Cl˙2(theta) = Im Li˙2(exp(i theta)).

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Ødawson -*- texinfo -*-

`y = dawson (x)` [Loadable Function]
`[y, err] = dawson (...)` [Loadable Function]

The Dawson integral is defined by exp(-xˆ2) int˙0ˆx dt exp(tˆ2). A table of Dawson integral can be found in Abramowitz & Stegun, Table 7.5.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Ødebye˙1 -*- texinfo -*-

`y = debye_1 (x)` [Loadable Function]
`[y, err] = debye_1 (...)` [Loadable Function]

The Debye functions are defined by the integral

D˙n(x) = n/xˆn int˙0ˆx dt (tˆn/(eˆt - 1)).

For further information see Abramowitz & Stegun, Section 27.1.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Ødebye˙2 -*- texinfo -*-

`y = debye_2 (x)` [Loadable Function]
`[y, err] = debye_2 (...)` [Loadable Function]

The Debye functions are defined by the integral

D˙n(x) = n/xˆn int˙0ˆx dt (tˆn/(eˆt - 1)).

For further information see Abramowitz & Stegun, Section 27.1.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Ødebye˙3 -*- texinfo -*-

y = `debye_3` (*x*) [Loadable Function]
[*y*, *err*] = `debye_3` (...) [Loadable Function]

The Debye functions are defined by the integral

D˙n(x) = n/xˆn int˙0ˆx dt (tˆn/(eˆt - 1)).

For further information see Abramowitz & Stegun, Section 27.1.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Ødebye˙4 -*- texinfo -*-

y = `debye_4` (*x*) [Loadable Function]
[*y*, *err*] = `debye_4` (...) [Loadable Function]

The Debye functions are defined by the integral

D˙n(x) = n/xˆn int˙0ˆx dt (tˆn/(eˆt - 1)).

For further information see Abramowitz & Stegun, Section 27.1.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øerf˙gsl -*- texinfo -*-

y = `erf_gsl` (*x*) [Loadable Function]
[*y*, *err*] = `erf_gsl` (...) [Loadable Function]

These routines compute the error function erf(x) = (2/sqrt(pi)) int˙0ˆx dt exp(-tˆ2).

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øerfc˙gsl -*- texinfo -*-

y = `erfc_gsl` (*x*) [Loadable Function]
[*y*, *err*] = `erfc_gsl` (...) [Loadable Function]

These routines compute the complementary error function erfc(x) = 1 - erf(x) = (2/sqrt(pi)) int˙xˆinfty exp(-tˆ2).

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Ølog˙erfc -*- texinfo -*-

y = `log_erfc` (*x*) [Loadable Function]
[*y*, *err*] = `log_erfc` (...) [Loadable Function]

These routines compute the logarithm of the complementary error function log(erfc(x)).

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øerf˙Z -*- texinfo -*-

y = `erf_Z (x)` [Loadable Function]

[*y*, *err*] = `erf_Z (...)` [Loadable Function]

These routines compute the Gaussian probability function Z(x) = (1/(2pi)) exp(-x^2/2).

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øerf˙Q -*- texinfo -*-

y = `erf_Q (x)` [Loadable Function]

[*y*, *err*] = `erf_Q (...)` [Loadable Function]

These routines compute the upper tail of the Gaussian probability function Q(x) = (1/(2pi)) int˙x^infty dt exp(-t^2/2).

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øhazard -*- texinfo -*-

y = `hazard` (*x*) [Loadable Function]

[*y*, *err*] = `hazard (...)` [Loadable Function]

The hazard function for the normal distrbution, also known as the inverse Mill's ratio, is defined as h(x) = Z(x)/Q(x) = sqrt{2/pi exp(-x^2 / 2) / erfc(x/sqrt 2)}. It decreases rapidly as x approaches -infty and asymptotes to h(x) sim x as x approaches +infty.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øexpm1 -*- texinfo -*-

y = `expm1 (x)` [Loadable Function]

[*y*, *err*] = `expm1 (...)` [Loadable Function]

These routines compute the quantity exp(x)-1 using an algorithm that is accurate for small x.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øexprel -*- texinfo -*-

y = exprel (*x*) [Loadable Function]
[*y*, *err*] = exprel (...) [Loadable Function]

These routines compute the quantity (exp(x)-1)/x using an algorithm that is accurate for small x. For small x the algorithm is based on the expansion (exp(x)-1)/x = 1 + x/2 + x^2/(2*3) + x^3/(2*3*4) + dots.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øexprel˙2 -*- texinfo -*-

y = exprel_2 (*x*) [Loadable Function]
[*y*, *err*] = exprel_2 (...) [Loadable Function]

These routines compute the quantity 2(exp(x)-1-x)/x^2 using an algorithm that is accurate for small x. For small x the algorithm is based on the expansion 2(exp(x)-1-x)/x^2 = 1 + x/3 + x^2/(3*4) + x^3/(3*4*5) + dots.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øexpint˙E1 -*- texinfo -*-

y = expint_E1 (*x*) [Loadable Function]
[*y*, *err*] = expint_E1 (...) [Loadable Function]

These routines compute the exponential integral E˙1(x),

E˙1(x) := Re int˙1^infty dt exp(-xt)/t.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øexpint˙E2 -*- texinfo -*-

y = expint_E2 (*x*) [Loadable Function]
[*y*, *err*] = expint_E2 (...) [Loadable Function]

These routines compute the second-order exponential integral E˙2(x),

E˙2(x) := Re int˙1^infty dt exp(-xt)/t^2.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øexpint˙Ei -*- texinfo -*-

y = expint_Ei (*x*) [Loadable Function]
[*y*, *err*] = expint_Ei (...) [Loadable Function]

These routines compute the exponential integral E˙i(x),

Ei(x) := - PV(int˙{-x}^infty dt exp(-t)/t)

where PV denotes the principal value of the integral.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

ØShi -*- texinfo -*-

y = Shi (*x*) [Loadable Function]
[*y*, *err*] = Shi (. . .) [Loadable Function]

These routines compute the integral Shi(x) = int˙0^x dt sinh(t)/t.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

ØChi -*- texinfo -*-

y = Chi (*x*) [Loadable Function]
[*y*, *err*] = Chi (. . .) [Loadable Function]

These routines compute the integral

Chi(x) := Re[gamma˙E + log(x) + int˙0^x dt (cosh[t]-1)/t] ,

where gamma˙E is the Euler constant.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øexpint˙3 -*- texinfo -*-

y = expint_3 (*x*) [Loadable Function]
[*y*, *err*] = expint_3 (. . .) [Loadable Function]

These routines compute the exponential integral Ei˙3(x) = int˙0^x dt exp(-t^3) for x >= 0.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

ØSi -*- texinfo -*-

y = Si (*x*) [Loadable Function]
[*y*, *err*] = Si (. . .) [Loadable Function]

These routines compute the Sine integral Si(x) = int˙0^x dt sin(t)/t.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

ØCi -*- texinfo -*-

y = `Ci` (*x*) [Loadable Function]
[*y*, *err*] = `Ci` (. . .) [Loadable Function]

These routines compute the Cosine integral Ci(x) = -int˙x^infty dt cos(t)/t for x > 0.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øatanint -*- texinfo -*-

y = `atanint` (*x*) [Loadable Function]
[*y*, *err*] = `atanint` (. . .) [Loadable Function]

These routines compute the Arctangent integral AtanInt(x) = int˙0^x dt arctan(t)/t.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øfermi˙dirac˙mhalf -*- texinfo -*-

y = `fermi_dirac_mhalf` (*x*) [Loadable Function]
[*y*, *err*] = `fermi_dirac_mhalf` (. . .) [Loadable Function]

These routines compute the complete Fermi-Dirac integral F˙{-1/2}(x).

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øfermi˙dirac˙half -*- texinfo -*-

y = `fermi_dirac_half` (*x*) [Loadable Function]
[*y*, *err*] = `fermi_dirac_half` (. . .) [Loadable Function]

These routines compute the complete Fermi-Dirac integral F˙{1/2}(x).

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øfermi˙dirac˙3half -*- texinfo -*-

y = `fermi_dirac_3half` (*x*) [Loadable Function]
[*y*, *err*] = `fermi_dirac_3half` (. . .) [Loadable Function]

These routines compute the complete Fermi-Dirac integral F˙{3/2}(x).

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øgamma˙gsl -*- texinfo -*-

y = gamma_gsl (*x*) [Loadable Function]
[*y*, *err*] = gamma_gsl (...) [Loadable Function]

These routines compute the Gamma function Gamma(x), subject to x not being a negative integer. The function is computed using the real Lanczos method. The maximum value of x such that Gamma(x) is not considered an overflow is given by the macro GSL˙SF˙GAMMA˙XMAX and is 171.0.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Ølngamma˙gsl -*- texinfo -*-

y = lngamma_gsl (*x*) [Loadable Function]
[*y*, *err*] = lngamma_gsl (...) [Loadable Function]

These routines compute the logarithm of the Gamma function, log(Gamma(x)), subject to x not a being negative integer. For x<0 the real part of log(Gamma(x)) is returned, which is equivalent to log(|Gamma(x)|). The function is computed using the real Lanczos method.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øgammastar -*- texinfo -*-

y = gammastar (*x*) [Loadable Function]
[*y*, *err*] = gammastar (...) [Loadable Function]

These routines compute the regulated Gamma Function Gamma^*(x) for x > 0. The regulated gamma function is given by,

Gamma^*(x) = Gamma(x)/(sqrt{2pi} x^{(x-1/2)} exp(-x)) = (1 + (1/12x) + ...) for x to infty

and is a useful suggestion of Temme.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øgammainv˙gsl -*- texinfo -*-

y = gammainv_gsl (*x*) [Loadable Function]
[*y*, *err*] = gammainv_gsl (...) [Loadable Function]

These routines compute the reciprocal of the gamma function, 1/Gamma(x) using the real Lanczos method.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Ølambert˙W0 -*- texinfo -*-

y = lambert_W0 (*x*) [Loadable Function]
[*y*, *err*] = lambert_W0 (...) [Loadable Function]

These compute the principal branch of the Lambert W function, W˙0(x).

Lambert's W functions, W(x), are defined to be solutions of the equation W(x) exp(W(x)) = x. This function has multiple branches for x < 0; however, it has only two real-valued branches. We define W˙0(x) to be the principal branch, where W > -1 for x < 0, and W˙{-1}(x) to be the other real branch, where W < -1 for x < 0.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Ølambert˙Wm1 -*- texinfo -*-

y = lambert_Wm1 (*x*) [Loadable Function]
[*y*, *err*] = lambert_Wm1 (...) [Loadable Function]

These compute the secondary real-valued branch of the Lambert W function, W˙{-1}(x).

Lambert's W functions, W(x), are defined to be solutions of the equation W(x) exp(W(x)) = x. This function has multiple branches for x < 0; however, it has only two real-valued branches. We define W˙0(x) to be the principal branch, where W > -1 for x < 0, and W˙{-1}(x) to be the other real branch, where W < -1 for x < 0.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Ølog˙1plusx -*- texinfo -*-

y = log_1plusx (*x*) [Loadable Function]
[*y*, *err*] = log_1plusx (...) [Loadable Function]

These routines compute log(1 + x) for x > -1 using an algorithm that is accurate for small x.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Ølog˙1plusx˙mx -*- texinfo -*-

y = log_1plusx_mx (*x*) [Loadable Function]
[*y*, *err*] = log_1plusx_mx (...) [Loadable Function]

These routines compute log(1 + x) - x for x > -1 using an algorithm that is accurate for small x.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øpsi -*- texinfo -*-

`y = psi (x)` [Loadable Function]
`[y, err] = psi (...)` [Loadable Function]

These routines compute the digamma function psi(x) for general x, x e 0.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øpsi˙1piy -*- texinfo -*-

`y = psi_1piy (x)` [Loadable Function]
`[y, err] = psi_1piy (...)` [Loadable Function]

These routines compute the real part of the digamma function on the line 1+i y, Re[psi(1 + i y)].

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øsynchrotron˙1 -*- texinfo -*-

`y = synchrotron_1 (x)` [Loadable Function]
`[y, err] = synchrotron_1 (...)` [Loadable Function]

These routines compute the first synchrotron function x int˙x^infty dt K˙{5/3}(t) for x >= 0.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øsynchrotron˙2 -*- texinfo -*-

`y = synchrotron_2 (x)` [Loadable Function]
`[y, err] = synchrotron_2 (...)` [Loadable Function]

These routines compute the second synchrotron function x K˙{2/3}(x) for x >= 0.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øtransport˙2 -*- texinfo -*-

`y = transport_2 (x)` [Loadable Function]
`[y, err] = transport_2 (...)` [Loadable Function]

These routines compute the transport function J(2,x).

The transport functions J(n,x) are defined by the integral representations J(n,x) := int˙0^x dt t^n e^t /(e^t - 1)^2.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øtransport˙3 -*- texinfo -*-

y = transport_3 (*x*) [Loadable Function]
[*y*, *err*] = transport_3 (...) [Loadable Function]

These routines compute the transport function J(3,x).

The transport functions J(n,x) are defined by the integral representations J(n,x) := int˙0^x dt t^n e^t /(e^t - 1)^2.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øtransport˙4 -*- texinfo -*-

y = transport_4 (*x*) [Loadable Function]
[*y*, *err*] = transport_4 (...) [Loadable Function]

These routines compute the transport function J(4,x).

The transport functions J(n,x) are defined by the integral representations J(n,x) := int˙0^x dt t^n e^t /(e^t - 1)^2.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øtransport˙5 -*- texinfo -*-

y = transport_5 (*x*) [Loadable Function]
[*y*, *err*] = transport_5 (...) [Loadable Function]

These routines compute the transport function J(5,x).

The transport functions J(n,x) are defined by the integral representations J(n,x) := int˙0^x dt t^n e^t /(e^t - 1)^2.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øsinc˙gsl -*- texinfo -*-

y = sinc_gsl (*x*) [Loadable Function]
[*y*, *err*] = sinc_gsl (...) [Loadable Function]

These routines compute sinc(x) = sin(pi x) / (pi x) for any value of x.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Ølnsinh -*- texinfo -*-

y = lnsinh (*x*) [Loadable Function]
[*y*, *err*] = lnsinh (...) [Loadable Function]

These routines compute log(sinh(x)) for x > 0.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Ølncosh -*- texinfo -*-

y = `lncosh` (*x*) [Loadable Function]
[*y*, *err*] = `lncosh` (...) [Loadable Function]

These routines compute log(cosh(x)) for any x.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øzeta -*- texinfo -*-

y = `zeta` (*x*) [Loadable Function]
[*y*, *err*] = `zeta` (...) [Loadable Function]

These routines compute the Riemann zeta function zeta(s) for arbitrary s, s e 1.

The Riemann zeta function is defined by the infinite sum zeta(s) = sum˙{k=1}^infty k^{-s}.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øeta -*- texinfo -*-

y = `eta` (*x*) [Loadable Function]
[*y*, *err*] = `eta` (...) [Loadable Function]

These routines compute the eta function eta(s) for arbitrary s.

The eta function is defined by eta(s) = (1-2^{1-s}) zeta(s).

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øbessel˙Jn -*- texinfo -*-

y = `bessel_Jn` (*n*, *x*) [Loadable Function]
[*y*, *err*] = `bessel_Jn` (...) [Loadable Function]

These routines compute the regular cylindrical Bessel function of order n, J˙n(x).

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øbessel˙Yn -*- texinfo -*-

y = `bessel_Yn` (*n*, *x*) [Loadable Function]
[*y*, *err*] = `bessel_Yn` (...) [Loadable Function]

These routines compute the irregular cylindrical Bessel function of order n, Y˙n(x), for x>0.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øbessel˙In -*- texinfo -*-

y = bessel_In (*n*, *x*) [Loadable Function]
[*y*, *err*] = bessel_In (. . .) [Loadable Function]

These routines compute the regular modified cylindrical Bessel function of order n, I˙n(x).

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øbessel˙In˙scaled -*- texinfo -*-

y = bessel_In_scaled (*n*, *x*) [Loadable Function]
[*y*, *err*] = bessel_In_scaled (. . .) [Loadable Function]

These routines compute the scaled regular modified cylindrical Bessel function of order n, exp(-|x|) I˙n(x)

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øbessel˙Kn -*- texinfo -*-

y = bessel_Kn (*n*, *x*) [Loadable Function]
[*y*, *err*] = bessel_Kn (. . .) [Loadable Function]

These routines compute the irregular modified cylindrical Bessel function of order n, K˙n(x), for x > 0.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øbessel˙Kn˙scaled -*- texinfo -*-

y = bessel_Kn_scaled (*n*, *x*) [Loadable Function]
[*y*, *err*] = bessel_Kn_scaled (. . .) [Loadable Function]

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øbessel˙jl -*- texinfo -*-

y = bessel_jl (*n*, *x*) [Loadable Function]
[*y*, *err*] = bessel_jl (. . .) [Loadable Function]

These routines compute the regular spherical Bessel function of order l, j˙l(x), for l >= 0 and x >= 0.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øbessel˙yl -*- texinfo -*-

`y = bessel_yl (n, x)` [Loadable Function]
`[y, err] = bessel_yl (...)` [Loadable Function]

These routines compute the irregular spherical Bessel function of order l, y˙l(x), for l >= 0.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øbessel˙il˙scaled -*- texinfo -*-

`y = bessel_il_scaled (n, x)` [Loadable Function]
`[y, err] = bessel_il_scaled (...)` [Loadable Function]

These routines compute the scaled regular modified spherical Bessel function of order l, exp(-|x|) i˙l(x)

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øbessel˙kl˙scaled -*- texinfo -*-

`y = bessel_kl_scaled (n, x)` [Loadable Function]
`[y, err] = bessel_kl_scaled (...)` [Loadable Function]

These routines compute the scaled irregular modified spherical Bessel function of order l, exp(x) k˙l(x), for x>0.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øexprel˙n -*- texinfo -*-

`y = exprel_n (n, x)` [Loadable Function]
`[y, err] = exprel_n (...)` [Loadable Function]

These routines compute the N-relative exponential, which is the n-th generalization of the functions gsl˙sf˙exprel and gsl˙sf˙exprel2. The N-relative exponential is given by,

exprel˙N(x) = N!/x^N (exp(x) - sum˙{k=0}^{N-1} x^k/k!) = 1 + x/(N+1) + x^2/((N+1)(N+2)) + ... = 1F1 (1,1+N,x)

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øfermi˙dirac˙int -*- texinfo -*-

y = **fermi_dirac_int** (*n*, *x*) [Loadable Function]
[*y*, *err*] = **fermi_dirac_int** (. . .) [Loadable Function]

These routines compute the complete Fermi-Dirac integral with an integer index of j, F˙j(x) = (1/Gamma(j+1)) int˙0ˆinfty dt (tˆj /(exp(t-x)+1)).

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øtaylorcoeff -*- texinfo -*-

y = **taylorcoeff** (*n*, *x*) [Loadable Function]
[*y*, *err*] = **taylorcoeff** (. . .) [Loadable Function]

These routines compute the Taylor coefficient xˆn / n! for x >= 0, n >= 0.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Ølegendre˙Pl -*- texinfo -*-

y = **legendre_Pl** (*n*, *x*) [Loadable Function]
[*y*, *err*] = **legendre_Pl** (. . .) [Loadable Function]

These functions evaluate the Legendre polynomial P˙l(x) for a specific value of l, x subject to l >= 0, |x| <= 1

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Ølegendre˙Ql -*- texinfo -*-

y = **legendre_Ql** (*n*, *x*) [Loadable Function]
[*y*, *err*] = **legendre_Ql** (. . .) [Loadable Function]

These routines compute the Legendre function Q˙l(x) for x > -1, x != 1 and l >= 0.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øpsi˙n -*- texinfo -*-

y = **psi_n** (*n*, *x*) [Loadable Function]
[*y*, *err*] = **psi_n** (. . .) [Loadable Function]

These routines compute the polygamma function psiˆ{(m)}(x) for m >= 0, x > 0.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øbessel˙Jnu -*- texinfo -*-

z = **bessel_Jnu** (*x*, *y*) [Loadable Function]
[*z*, *err*] = **bessel_Jnu** (...) [Loadable Function]

These routines compute the regular cylindrical Bessel function of fractional order nu, J˙u(x).

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øbessel˙Ynu -*- texinfo -*-

z = **bessel_Ynu** (*x*, *y*) [Loadable Function]
[*z*, *err*] = **bessel_Ynu** (...) [Loadable Function]

These routines compute the irregular cylindrical Bessel function of fractional order nu, Y˙u(x).

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øbessel˙Inu -*- texinfo -*-

z = **bessel_Inu** (*x*, *y*) [Loadable Function]
[*z*, *err*] = **bessel_Inu** (...) [Loadable Function]

These routines compute the regular modified Bessel function of fractional order nu, I˙u(x) for x>0, u>0.

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øbessel˙Inu˙scaled -*- texinfo -*-

z = **bessel_Inu_scaled** (*x*, *y*) [Loadable Function]
[*z*, *err*] = **bessel_Inu_scaled** (...) [Loadable Function]

These routines compute the scaled regular modified Bessel function of fractional order nu, exp(-|x|)I˙u(x) for x>0, u>0.

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øbessel˙Knu -*- texinfo -*-

z = **bessel_Knu** (*x*, *y*) [Loadable Function]
[*z*, *err*] = **bessel_Knu** (...) [Loadable Function]

These routines compute the irregular modified Bessel function of fractional order nu, K˙u(x) for x>0, u>0.

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øbessel˙lnKnu -*- texinfo -*-

`z = bessel_lnKnu (x, y)` [Loadable Function]
`[z, err] = bessel_lnKnu (...)` [Loadable Function]

These routines compute the logarithm of the irregular modified Bessel function of fractional order nu, ln(K˙u(x)) for x>0, u>0.

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øbessel˙Knu˙scaled -*- texinfo -*-

`z = bessel_Knu_scaled (x, y)` [Loadable Function]
`[z, err] = bessel_Knu_scaled (...)` [Loadable Function]

These routines compute the scaled irregular modified Bessel function of fractional order nu, exp(+|x|) K˙u(x) for x>0, u>0.

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øexp˙mult -*- texinfo -*-

`z = exp_mult (x, y)` [Loadable Function]
`[z, err] = exp_mult (...)` [Loadable Function]

These routines exponentiate x and multiply by the factor y to return the product y exp(x).

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øfermi˙dirac˙inc˙0 -*- texinfo -*-

`z = fermi_dirac_inc_0 (x, y)` [Loadable Function]
`[z, err] = fermi_dirac_inc_0 (...)` [Loadable Function]

These routines compute the incomplete Fermi-Dirac integral with an index of zero, F˙0(x,b) = ln(1 + e^{b-x}) - (b-x).

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øpoch -*- texinfo -*-

`z = poch (x, y)` [Loadable Function]
`[z, err] = poch (...)` [Loadable Function]

These routines compute the Pochhammer symbol

(a)˙x := Gamma(a + x)/Gamma(a),

subject to a and a+x not being negative integers. The Pochhammer symbol is also known as the Apell symbol.

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Ølnpoch -*- texinfo -*-

`z = lnpoch (`*x*, *y*`)` [Loadable Function]
`[`*z*`, `*err*`] = lnpoch (`. . .`)` [Loadable Function]

These routines compute the logarithm of the Pochhammer symbol, log((a)˙x) = log(Gamma(a + x)/Gamma(a)) for a > 0, a+x > 0.

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øpochrel -*- texinfo -*-

`z = pochrel (`*x*, *y*`)` [Loadable Function]
`[`*z*`, `*err*`] = pochrel (`. . .`)` [Loadable Function]

These routines compute the relative Pochhammer symbol ((a,x) - 1)/x where (a,x) = (a)˙x := Gamma(a + x)/Gamma(a).

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øgamma¨inc˙Q -*- texinfo -*-

`z = gamma_inc_Q (`*x*, *y*`)` [Loadable Function]
`[`*z*`, `*err*`] = gamma_inc_Q (`. . .`)` [Loadable Function]

These routines compute the normalized incomplete Gamma Function Q(a,x) = 1/Gamma(a) int˙xinfty dt t^{a-1} exp(-t) for a > 0, x >= 0.

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øgamma¨inc˙P -*- texinfo -*-

`z = gamma_inc_P (`*x*, *y*`)` [Loadable Function]
`[`*z*`, `*err*`] = gamma_inc_P (`. . .`)` [Loadable Function]

These routines compute the complementary normalized incomplete Gamma Function P(a,x) = 1/Gamma(a) int˙0^x dt t^{a-1} exp(-t) for a > 0, x >= 0.

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øgamma¨inc -*- texinfo -*-

`z = gamma_inc (x, y)` [Loadable Function]
`[z, err] = gamma_inc (...)` [Loadable Function]

These functions compute the incomplete Gamma Function the normalization factor included in the previously defined functions: Gamma(a,x) = int˙xinfty dt t^{a-1} exp(-t) for a real and x >= 0.

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øbeta˙gsl -*- texinfo -*-

`z = beta_gsl (x, y)` [Loadable Function]
`[z, err] = beta_gsl (...)` [Loadable Function]

These routines compute the Beta Function, B(a,b) = Gamma(a)Gamma(b)/Gamma(a+b) for a > 0, b > 0.

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Ølnbeta -*- texinfo -*-

`z = lnbeta (x, y)` [Loadable Function]
`[z, err] = lnbeta (...)` [Loadable Function]

These routines compute the logarithm of the Beta Function, log(B(a,b)) for a > 0, b > 0.

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øhyperg˙0F1 -*- texinfo -*-

`z = hyperg_0F1 (x, y)` [Loadable Function]
`[z, err] = hyperg_0F1 (...)` [Loadable Function]

These routines compute the hypergeometric function 0F1(c,x).

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

ØconicalP˙half -*- texinfo -*-

`z = conicalP_half (x, y)` [Loadable Function]
`[z, err] = conicalP_half (...)` [Loadable Function]

These routines compute the irregular Spherical Conical Function P^{1/2}˙{-1/2 + i lambda}(x) for x > -1.

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

ØconicalP˙mhalf -*- texinfo -*-

`z = conicalP_mhalf (x, y)` [Loadable Function]
`[z, err] = conicalP_mhalf (...)` [Loadable Function]

These routines compute the regular Spherical Conical Function P^{-1/2}˙{-1/2 + i lambda}(x) for x > -1.

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

ØconicalP˙0 -*- texinfo -*-

`z = conicalP_0 (x, y)` [Loadable Function]
`[z, err] = conicalP_0 (...)` [Loadable Function]

These routines compute the conical function P^0˙{-1/2 + i lambda}(x) for x > -1.

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

ØconicalP˙1 -*- texinfo -*-

`z = conicalP_1 (x, y)` [Loadable Function]
`[z, err] = conicalP_1 (...)` [Loadable Function]

These routines compute the conical function P^1˙{-1/2 + i lambda}(x) for x > -1.

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øhzeta -*- texinfo -*-

`z = hzeta (x, y)` [Loadable Function]
`[z, err] = hzeta (...)` [Loadable Function]

These routines compute the Hurwitz zeta function zeta(s,q) for s > 1, q > 0.

err contains an estimate of the absolute error in the value *z*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øairy˙Ai -*- texinfo -*-

`y = airy_Ai (x, mode)` [Loadable Function]
`[y, err] = airy_Ai (...)` [Loadable Function]

These routines compute the Airy function Ai(x) with an accuracy specified by mode.

The second argument *mode* must be an integer corresponding to

0 = GSL˙PREC˙DOUBLE

Double-precision, a relative accuracy of approximately `2 * 10^-16`.

1 = GSL˙PREC˙SINGLE

Single-precision, a relative accuracy of approximately `10^-7`.

2 = GSL˙PREC˙APPROX

Approximate values, a relative accuracy of approximately `5 * 10^-4`.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øairy˙Bi -*- texinfo -*-

`y = airy_Bi (x, mode)` [Loadable Function]

`[y, err] = airy_Bi (...)` [Loadable Function]

These routines compute the Airy function Bi(x) with an accuracy specified by mode.

The second argument *mode* must be an integer corresponding to

0 = GSL˙PREC˙DOUBLE

Double-precision, a relative accuracy of approximately `2 * 10^-16`.

1 = GSL˙PREC˙SINGLE

Single-precision, a relative accuracy of approximately `10^-7`.

2 = GSL˙PREC˙APPROX

Approximate values, a relative accuracy of approximately `5 * 10^-4`.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øairy˙Ai˙scaled -*- texinfo -*-

`y = airy_Ai_scaled (x, mode)` [Loadable Function]

`[y, err] = airy_Ai_scaled (...)` [Loadable Function]

These routines compute a scaled version of the Airy function S˙A(x) Ai(x). For x>0 the scaling factor S˙A(x) is exp(+(2/3) x^(3/2)), and is 1 for x<0.

The second argument *mode* must be an integer corresponding to

0 = GSL˙PREC˙DOUBLE

Double-precision, a relative accuracy of approximately `2 * 10^-16`.

1 = GSL˙PREC˙SINGLE

Single-precision, a relative accuracy of approximately `10^-7`.

2 = GSL˙PREC˙APPROX

Approximate values, a relative accuracy of approximately `5 * 10^-4`.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øairy˙Bi˙scaled -*- texinfo -*-

y = airy_Bi_scaled (*x*, *mode*) [Loadable Function]
[*y*, *err*] = airy_Bi_scaled (. . .) [Loadable Function]

These routines compute a scaled version of the Airy function S˙B(x) Bi(x). For x>0 the scaling factor S˙B(x) is exp(-(2/3) x^(3/2)), and is 1 for x<0.

The second argument *mode* must be an integer corresponding to

0 = GSL˙PREC˙DOUBLE
Double-precision, a relative accuracy of approximately `2 * 10^-16`.

1 = GSL˙PREC˙SINGLE
Single-precision, a relative accuracy of approximately `10^-7`.

2 = GSL˙PREC˙APPROX
Approximate values, a relative accuracy of approximately `5 * 10^-4`.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øairy˙Ai˙deriv -*- texinfo -*-

y = airy_Ai_deriv (*x*, *mode*) [Loadable Function]
[*y*, *err*] = airy_Ai_deriv (. . .) [Loadable Function]

These routines compute the Airy function derivative Ai'(x) with an accuracy specified by mode.

The second argument *mode* must be an integer corresponding to

0 = GSL˙PREC˙DOUBLE
Double-precision, a relative accuracy of approximately `2 * 10^-16`.

1 = GSL˙PREC˙SINGLE
Single-precision, a relative accuracy of approximately `10^-7`.

2 = GSL˙PREC˙APPROX
Approximate values, a relative accuracy of approximately `5 * 10^-4`.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øairy˙Bi˙deriv -*- texinfo -*-

y = airy_Bi_deriv (*x*, *mode*) [Loadable Function]
[*y*, *err*] = airy_Bi_deriv (. . .) [Loadable Function]

These routines compute the Airy function derivative Bi'(x) with an accuracy specified by mode.

The second argument *mode* must be an integer corresponding to

0 = GSL˙PREC˙DOUBLE
Double-precision, a relative accuracy of approximately `2 * 10^-16`.

1 = GSL˙PREC˙SINGLE
Single-precision, a relative accuracy of approximately `10^-7`.

2 = GSL˙PREC˙APPROX
Approximate values, a relative accuracy of approximately `5 * 10^-4`.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øairy˙Ai˙deriv˙scaled -*- texinfo -*-

`y = airy_Ai_deriv_scaled (x, mode)` [Loadable Function]
`[y, err] = airy_Ai_deriv_scaled (...)` [Loadable Function]

These routines compute the derivative of the scaled Airy function S˙A(x) Ai(x).

The second argument *mode* must be an integer corresponding to

0 = GSL˙PREC˙DOUBLE
Double-precision, a relative accuracy of approximately `2 * 10^-16`.

1 = GSL˙PREC˙SINGLE
Single-precision, a relative accuracy of approximately `10^-7`.

2 = GSL˙PREC˙APPROX
Approximate values, a relative accuracy of approximately `5 * 10^-4`.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øairy˙Bi˙deriv˙scaled -*- texinfo -*-

`y = airy_Bi_deriv_scaled (x, mode)` [Loadable Function]
`[y, err] = airy_Bi_deriv_scaled (...)` [Loadable Function]

These routines compute the derivative of the scaled Airy function S˙B(x) Bi(x).

The second argument *mode* must be an integer corresponding to

0 = GSL˙PREC˙DOUBLE
Double-precision, a relative accuracy of approximately `2 * 10^-16`.

1 = GSL˙PREC˙SINGLE
Single-precision, a relative accuracy of approximately `10^-7`.

2 = GSL˙PREC˙APPROX
Approximate values, a relative accuracy of approximately `5 * 10^-4`.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øellint˙Kcomp -*- texinfo -*-

`y = ellint_Kcomp (x, mode)` [Loadable Function] `[y, err] = ellint_Kcomp (...)` [Loadable Function]

These routines compute the complete elliptic integral K(k)

$$K(k) = \int_0^{\pi/2} \frac{dt}{\sqrt{(1 - k^2 \sin^2(t))}}$$

The notation used here is based on Carlson, *Numerische Mathematik* 33 (1979) and differs slightly from that used by Abramowitz & Stegun, where the functions are given in terms of the parameter $m = k^2$.

The second argument *mode* must be an integer corresponding to

0 = GSL˙PREC˙DOUBLE
: Double-precision, a relative accuracy of approximately `2 * 10^-16`.

1 = GSL˙PREC˙SINGLE
: Single-precision, a relative accuracy of approximately `10^-7`.

2 = GSL˙PREC˙APPROX
: Approximate values, a relative accuracy of approximately `5 * 10^-4`.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øellint˙Ecomp -*- texinfo -*-

`y = ellint_Ecomp (x, mode)` [Loadable Function]
`[y, err] = ellint_Ecomp (...)` [Loadable Function]

These routines compute the complete elliptic integral E(k) to the accuracy specified by the mode variable mode.

$$E(k) = \int_0^{\pi/2} \sqrt{(1 - k^2 \sin^2(t))} dt$$

The notation used here is based on Carlson, *Numerische Mathematik* 33 (1979) and differs slightly from that used by Abramowitz & Stegun, where the functions are given in terms of the parameter $m = k^2$.

The second argument *mode* must be an integer corresponding to

0 = GSL˙PREC˙DOUBLE
: Double-precision, a relative accuracy of approximately `2 * 10^-16`.

1 = GSL˙PREC˙SINGLE
: Single-precision, a relative accuracy of approximately `10^-7`.

2 = GSL˙PREC˙APPROX
: Approximate values, a relative accuracy of approximately `5 * 10^-4`.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øairy˙zero˙Ai -*- texinfo -*-

y = airy_zero_Ai (*n*) [Loadable Function]
[*y*, *err*] = airy_zero_Ai (. . .) [Loadable Function]

These routines compute the location of the s-th zero of the Airy function Ai(x).

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øairy˙zero˙Bi -*- texinfo -*-

y = airy_zero_Bi (*n*) [Loadable Function]
[*y*, *err*] = airy_zero_Bi (. . .) [Loadable Function]

These routines compute the location of the s-th zero of the Airy function Bi(x).

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øairy˙zero˙Ai˙deriv -*- texinfo -*-

y = airy_zero_Ai_deriv (*n*) [Loadable Function]
[*y*, *err*] = airy_zero_Ai_deriv (. . .) [Loadable Function]

These routines compute the location of the s-th zero of the Airy function derivative Ai(x).

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øairy˙zero˙Bi˙deriv -*- texinfo -*-

y = airy_zero_Bi_deriv (*n*) [Loadable Function]
[*y*, *err*] = airy_zero_Bi_deriv (. . .) [Loadable Function]

These routines compute the location of the s-th zero of the Airy function derivative Bi(x).

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øbessel˙zero˙J0 -*- texinfo -*-

y = bessel_zero_J0 (*n*) [Loadable Function]
[*y*, *err*] = bessel_zero_J0 (. . .) [Loadable Function]

These routines compute the location of the s-th positive zero of the Bessel function J˙0(x).

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øbessel˙zero˙J1 -*- texinfo -*-

y = bessel_zero_J1 (*n*) [Loadable Function]
[*y*, *err*] = bessel_zero_J1 (...) [Loadable Function]

These routines compute the location of the s-th positive zero of the Bessel function J˙1(x).

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øpsi˙1˙int -*- texinfo -*-

y = psi_1_int (*n*) [Loadable Function]
[*y*, *err*] = psi_1_int (...) [Loadable Function]

These routines compute the Trigamma function psi(n) for positive integer n.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øzeta˙int -*- texinfo -*-

y = zeta_int (*n*) [Loadable Function]
[*y*, *err*] = zeta_int (...) [Loadable Function]

These routines compute the Riemann zeta function zeta(n) for integer n, n e 1.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Øeta˙int -*- texinfo -*-

y = eta_int (*n*) [Loadable Function]
[*y*, *err*] = eta_int (...) [Loadable Function]

These routines compute the eta function eta(n) for integer n.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Ølegendre˙Plm -*- texinfo -*-

y = legendre_Plm (*n*, *m*, *x*) [Loadable Function]
[*y*, *err*] = legendre_Plm (...) [Loadable Function]

These routines compute the associated Legendre polynomial P˙lˆm(x) for m >= 0, l >= m, |x| <= 1.

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see http://www.gnu.org/software/gsl/ for documentation.

Ølegendre˙sphPlm -*- texinfo -*-

y = **legendre_sphPlm** (*n*, *m*, *x*) [Loadable Function]

[*y*, *err*] = **legendre_sphPlm** (. . .) [Loadable Function]

These routines compute the normalized associated Legendre polynomial $sqrt{(2l+1)/(4pi)} sqrt{(l-m)!/(l+m)!} P˙l^m(x)$ suitable for use in spherical harmonics. The parameters must satisfy m >= 0, l >= m, |x| <= 1. Theses routines avoid the overflows that occur for the standard normalization of P˙l^m(x).

err contains an estimate of the absolute error in the value *y*.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øhyperg˙U -*- texinfo -*-

out = **hyperg_U** (*x0*, *x1*, *x2*) [Loadable Function]

[*out*, *err*] = **hyperg_U** (. . .) [Loadable Function]

Secondary Confluent Hypergoemetric U function A&E 13.1.3 All input are double as is the output.

err contains an estimate of the absolute error in the value *out*.a.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.

Øhyperg˙1F1 -*- texinfo -*-

out = **hyperg_1F1** (*x0*, *x1*, *x2*) [Loadable Function]

[*out*, *err*] = **hyperg_1F1** (. . .) [Loadable Function]

Primary Confluent Hypergoemetric U function A&E 13.1.3 All inputs are double as is the output.

err contains an estimate of the absolute error in the value *out*.a.

This function is from the GNU Scientific Library, see `http://www.gnu.org/software/gsl/` for documentation.
